

# Pets age faster than people.

Do I look 45?

I'm 63!

## Does your pet act its age?

Determine your pet's "real" age.

**Your Pet's Age in Years**

\* Based on a medium-sized dog weighing 21-50 lbs. Many other factors, including weight and breed, may influence the aging process. Ask your veterinarian for your pet's age in human years.

\* Some breeds are considered "senior" as early as seven years of age.

Dogs and cats can age more than seven times faster than people, and major health changes can occur in a short amount of time.

Twice-a-year wellness exams can help your veterinarian diagnose, treat or prevent many health problems before they become life-threatening. Best of all, you'll help your pet live a longer, healthier and happier life. So schedule your best friend's wellness exam today.

Twice a year for life!
